## Construction class implements new learning modules

### Instructional Stations

Recently, the Technology program at Indian Creek High School purchased new learning modules from the company Hearlihy. The modules cover topics such as *electrical wiring, plumbing, home design, measuring, home security, & carpentry.*

The students took a pre-test before completing the modules to help determine the effectiveness of the new curriculum. While the preliminary data seems to suggest the modules were successful, some of the content and outcomes will require some modification and expansion. In addition, stations on cement, laying concrete block and roofing will be developed for the 2009-2010 school year.
